

The Complete Clinical OSCE Candidate Guide

How to use OSCE Revisions for medical-school and transferable UK clinical OSCEs — customisable mocks, full library, and the consultation skills every circuit rewards.

Tailored for Clinical OSCE · customisable mocks · UK consultation style

A practical walkthrough of the platform — from your first login to exam day.
Built around the way the platform actually works, page by page.
From the team behind MedRevisions — trusted by 30,000+ doctors since 2019.

MORE THAN CLINICAL OSCE

Dedicated tracks for PLAB 2 and MLA OSCE when you need exam-specific circuits — plus MedRevisions theory prep.

What's inside

Clinical OSCE on OSCE Revisions is for candidates who need strong UK consultation skills across medical-school finals, end-of-year OSCEs, and transferable clinical exams — with mocks you can shape to your school's format.

SECTION 01

The big picture

Clinical OSCE is the **flexible UK OSCE track**: full library access, UK guideline framing (NICE, CKS, BNF), and **customisable mock circuits** so you can approximate your medical school's station count, timing and viva rules.

- **Full 1,800+ library** — not PLAB-restricted.
- **Core must-know Start Here set (~665)** so you still have a spine, not chaos.
- **Mocks you can shape** — default timing is often 8 minutes with reading; adjust to match your school.
- **Same three-domain feedback** so you train Data Gathering, Clinical Management and Interpersonal Skills deliberately.

NEED A FIXED NATIONAL FORMAT?

Sitting **PLAB 2**? Use the [PLAB 2 guide](#). Sitting a **UKMLA CPSCA / finals-style 12x10 with viva**? Use the [MLA OSCE guide](#) and [mla-osce](#).

WHO'S BEHIND THIS

OSCE Revisions is the clinical-exams sister platform of MedRevisions, which has helped **30,000+ doctors** prepare for their licensing exams **since 2019**. Every note, framework, checklist and marking rubric is built and reviewed by **practicing doctors who know UK clinical OSCE assessment** — so what you study here is what the exam actually rewards. Learn more at [medrevisions.com](#) and [oscerevisions.com](#).

SECTION 02

The study loop

The platform is built around four jobs: Learn → Practise → Review → Simulate. Candidates who pass cycle through all four.

1 LEARN

Start Here, Frameworks, Notes, Mind Maps, Videos, Comparisons, Exam Tips, Specialty Guides.

2 PRACTISE

Station Scenarios and Build a Station with the AI patient — out loud, under the clock.

3 REVIEW

Session Review, Revision Notes, History, Analytics, AI Professor. Treat every "not met" as a to-do.

4 SIMULATE

Full timed Mock Exams so stamina, transitions and pacing become automatic.

THE LOOP THAT WORKS

Learn → Practise → Review → Practise again → Simulate. Aim to spend at least half your time in PRACTISE, REVIEW and SIMULATE — not only LEARN.

GETTING ORIENTED

SECTION 03

The platform map

Here's the entire sidebar, grouped the way the platform groups it.

STUDY	WHAT IT'S FOR
Dashboard	Progress, scores, and "what to do next" suggestions.
Start Here	Guided week-by-week roadmap through must-know topics.
Frameworks	Reusable consultation structures and mnemonics.
Notes	Core revision library — multi-tab notes per station/topic.
Videos	Curated clips across the guides.
Mind Maps	Visual maps of a topic's structure.
Exam Tips	High-yield pearls and a flashcard trainer.
Comparisons	Side-by-side differentials.
SPECIALTY GUIDES	WHAT IT'S FOR
Examinations	Physical examination checklists.
Procedures	Clinical procedure guides.
Prescribing	Doses, calculations, prescription templates.
Data Interpretation	Bloods, ECGs, ABGs, X-rays.
PRACTICE	WHAT IT'S FOR
Station Scenarios	Browse and launch AI patient stations.
Build a Station	Generate a station on any topic.
AI Professor	On-demand tutor.
Mock Exam	Full timed circuit mirroring your exam day.

MY PROGRESS	WHAT IT'S FOR
Revision Notes	AI notes from your own performance.
My Notes	Private notebook.
History	Past sessions, searchable.
Analytics	Weak-area detection across practice.

ONE THING ABOUT ACCESS

Every paid plan unlocks the whole platform. Plans differ by **AI Attempts**: separate **voice** and **text** pools. Free accounts start with 3 voice + 3 text. Text is not unlimited — see the Subscription page for current counts.

STUDY & PRACTISE

SECTION 04

Start Here • Frameworks • Notes

Follow **Start Here** week by week. Master consultation frameworks (playbook + Universal Five) so any station length your school uses still feels structured. Notes are written and reviewed by practicing doctors — Full Guide first, Examiner Checklist from memory, then live practice.

STUDY & PRACTISE

SECTION 05

Stations • customisable mocks

Station Scenarios for daily spoken reps (voice and text AI Attempts are both metered — free = 3 + 3). **Build a Station** when you need a case your curriculum emphasises. **Mock Exam** lets you rehearse your school's shape rather than forcing a single national template.

"BUT THE REAL EXAM HAS A HUMAN ACTOR..."

True — and everything the examiner marks is still produced by **you speaking**. Structure, fluency, signposting, empathy phrasing, time management: these are speaker-side skills. Candidates who arrive having done dozens of full spoken run-throughs consistently report the real encounter felt **easier** than practice — the hard part was already automatic.

TRACK

SECTION 06

Track progress & AI Attempts

Revision Notes, My Notes, History and Analytics close the loop: Analytics shows weak areas → Station Scenarios to drill them → Review generates a Revision Note → History shows the score climbing.

Every plan unlocks the entire platform. Plans are a one-time payment (not auto-renewing) and differ only by AI Attempts. And you're not betting on an unknown: OSCE Revisions comes from MedRevisions, which has supported 30,000+ doctors since 2019.

AI Attempts come in two pools: **voice** and **text**. A live voice station uses one voice attempt; text mode uses one text attempt. Free = 3 + 3. On standard plans text is typically twice the voice count. Budget text for structure warm-ups; save voice for full spoken runs.

PUTTING IT TOGETHER

SECTION 07

Strategy • links

1. Confirm your school's station count, timing and viva rules — then match mocks to them.
2. Frameworks first; Start Here anchors next; spoken practice daily.
3. Use Analytics to stop re-practising strengths.
4. In the final fortnight: full circuits that feel like **your** exam day.
