

MRCs OSCE Candidate Guide

How MRCS Part B / OSCE differs from GP-style consultation OSCEs, and how OSCE Revisions will support surgical clinical skills as the track launches.

MRCS OSCE · Surgical clinical skills · Coming soon

A practical walkthrough of the platform — from your first login to exam day.
Built around the way the platform actually works, page by page.
From the team behind MedRevisions — trusted by 30,000+ doctors since 2019.

LIVE NOW WHILE YOU WAIT

Communication and structured explanation still matter in surgical OSCEs — practise them on live tracks, without pretending GP stations are MRCS-complete.

What's inside

Short, honest guide: MRCS OSCE preparation is coming soon. This is a surgical clinical exam — not a rebadged PLAB/MLA consultation circuit.

What MRCS OSCE assesses

MRCS Part B / OSCE assesses **surgical** clinical skills: anatomy, pathology, critical care, procedural knowledge and structured communication in a surgical context. It is **not** the same exam as PLAB 2, MLA OSCE or a GP consultation OSCE — even when communication stations appear.

WHO'S BEHIND THIS

OSCE Revisions is the clinical-exams sister platform of MedRevisions, which has helped **30,000+ doctors** prepare for their licensing exams **since 2019**. Every note, framework, checklist and marking rubric is built and reviewed by **practicing doctors who know clinical exams — with surgical OSCE localisation as this track launches** — so what you study here is what the exam actually rewards. Learn more at medrevisions.com and oscerevisions.com.

Status on OSCE Revisions

COMING SOON — WAITLIST

Dedicated MRCS OSCE preparation is **coming soon**. Join the waitlist at oscerevisions.com/mrcs-osce. Current live stations are **not** a complete MRCS curriculum.

What transfers • what does not

Transfers: calm structured explanation, timed speaking, ICE where relevant, Learn → Practise → Review habits, and dual AI Attempts on live practice (free = 3 voice + 3 text).

"BUT THE REAL EXAM HAS A HUMAN ACTOR..."

True — and everything the examiner marks is still produced by **you speaking**. Structure, fluency, signposting, empathy phrasing, time management: these are speaker-side skills. Candidates who arrive having done dozens of full spoken run-throughs consistently report the real encounter felt **easier** than practice — the hard part was already automatic.

DO NOT

Do not assume practising PLAB/MLA GP-style stations alone prepares you for MRCS anatomy, pathology or surgical viva-style stations. Use live tracks for communication fluency only until MRCS content launches.
